Jim Ferguson recently spoke with data analyst Wouter Aukema, former MP Wybren van Haga and Anne Merel Kloosterman, representative of vaccination victims. Ferguson published the interview on X on Tuesday.

During the interview, Aukema shared a remarkable discovery he had made. He had decided to download all reported cases of side effects from the European Medicines Agency (EMA) website. So not only the corona vaccines, but also other medicines, reports Uncutnews.

Downloading this data manually would keep 100 people busy for 100 years, so he wrote a script to automate the process. This way he managed to download all the EMA data within two hours.

He wrote on X:

Exclusive breaking news: Dutch government data hacked and astonishing amount of COVID injection side effects captured. Astonishing amount of data captured. Millions of records now visible. There is a huge cover-up attempt, not only by the government in the Netherlands, but in every country infiltrated by globalists. The number of unnecessary deaths is exploding, but our governments are silent. Joining me from the Netherlands are Dutch freedom fighters and truth seekers, former Dutch MP and entrepreneur Wybren van Haga, businessman and data expert Wouter Aukema and Anne Merel Kloosterman, who represents many vaccination victims. The Dutch Minister of Health lied and must be held accountable. Parliamentarians are taken to court, but they would rather pay the fines imposed by the judge than reveal the information!!!! What do they have to hide?

After the introduction of the COVID shot, the number of reported side effects exploded. A year later something remarkable happened. In late 2022 and early 2023, the number of side effects from certain medications, such as Inflectra (infliximab) for inflammation and Keytruda (pembrolizumab) for cancer, exploded.

This means that a year after the introduction of the coronavirus vaccines, many more people than usual were suddenly prescribed medicines for inflammation and cancer.

“This is a very disturbing signal,” says Aukema. “That’s pretty shocking,” Ferguson replied.

He asked his three guests if they thought there was a population reduction agenda. “According to my research: Yes,” Kloosterman replied.

Aukema said he did not know if there was a sinister agenda behind it. “I mainly focus on the data.”

Van Haga thought this was an interesting question. According to him, we are being held hostage by a communist monster. He drew parallels with Pol Pot and Stalin: they too attacked the peasants, the landowners, the essence of private property.

“They say humanity is bad for the planet, they want to get rid of us,” Van Haga said of those above us. “It’s a strange ideology. They want us to die, not have children and be killed.”

“It’s very disturbing,” Ferguson added.
